

Travelers’ Health and Public Health Profiles for Port Health Station Staff

One interactive map and profile list for all 243 CDC Travelers’ Health destinations: CDC travel notices, disease risks and how travelers reach your station — in a single file that also works offline.

WHAT YOU CAN DO

See every destination

A map of 243 destinations with numbered dots for the CDC notice level. Filter by notice level, disease named in CDC notices, or Port Health Station.

Know the route

Home airports → common transit hubs → likely U.S. entry airports → the CDC Port Health Station for each, with live FlightAware links.

Reach your station

Pick a station to see the destinations that likely arrive there and its card: 24-hour phone, email, fax, jurisdiction and live flights.

Read the health picture

CDC notices, global polio and measles notices, a measles epi-curve with ▲ ▼ trends (2021–2026), and July and December weather.

Communicate and care

Languages, English level, messaging apps, food and dietary needs, and religion — to plan interpreters, meals and respectful care.

Share and stay current

Add profiles to a PDF briefing with clickable links. Refresh CDC Travel Alerts loads the latest notices. Links to CDC, WHO and the State Department.

SPOTLIGHT · GLOBAL OUTBREAK

Measles is rising around the world

256,224 measles cases were reported to WHO in January–August 2026 — about **40% more** than in the same months of 2025. Every profile has a measles epi-curve and trend, and the new  **Measles tab** maps every country with search, filters and sorting. See pages 2 and 3.

India · Measles cases reported to WHO

▲ 2026: Increasing

26,205 cases Jan–Aug, up 135% from Jan–Aug 2025

2021	2022	2023	2024	2025	2026*
5,700	40,967	65,150	18,530	17,995	26,205

FOUR STEPS

1

Find a destination: type its name, or use Navigate Regions / Countries.

2

Filter by Notice, Disease (e.g., Measles) or your Port Health Station.

3

View full profile for the health picture, route and care needs.

4

Share: Add to PDF → Print PDF for the shift briefing.

Who can use it

CDC Port Health Station and Quarantine Station staff; state, tribal, local and territorial health departments; ESF-8 and emergency planners; hospital and EMS staff who see arriving travelers.

Map at a glance

4 Avoid all travel · 3 Reconsider nonessential · 2 Enhanced precautions · 1 Usual precautions · grey = no country notice. Open **Legend** for flags, names and base maps.

Measles: what the numbers show and how the app helps

Reported measles cases rose sharply from 2023 and remain high in 2026. Because measles spreads so easily, travelers arriving from countries with active transmission matter for every Port Health Station.

REPORTED CASES WORLDWIDE, BY YEAR

Year	Cases (k)
2019	874
2020	160
2021	123
2022	207
2023	669
2024	476
2025	412
2026*	256

*2026: Jan–Aug, provisional

Sum of cases reported by countries to WHO; the number of countries reporting varies by year.

MOST CASES IN 2026 SO FAR

Bangladesh	64,127
Guatemala	30,462
India	26,205
Yemen	17,124
Pakistan	13,042
Mexico	12,811
Cameroon	9,630
Angola	7,413
Kazakhstan	7,127
South Africa	6,486

Jan–Aug 2026 or latest month reported; provisional.

2026 CASES BY WHO REGION

South-East Asia	91,093
Africa	54,264
Americas	49,481
Eastern Mediterranean	39,368
Europe	14,316
Western Pacific	7,702

HOW THE APP SHOWS MEASLES

- Measles tab: world map colored by 2026 cases or trend, epi-curve, and a searchable, sortable country table (page 3).
- Disease → Measles filters the main map and profiles to destinations under a CDC measles notice.
- Every profile has a monthly epi-curve (2023–2026) and WHO cases for 2021–2025 plus 2026 so far, with ▲ Increasing ▼ Decreasing → About the same .
- Map pop-ups show the latest figure and trend at a glance.

Trend: latest period vs the same months of the previous year; ▲ or ▼ at ±20%; fewer than 10 cases counts as about the same.

USING IT FOR MEASLES AT YOUR STATION

1 Before the shift, set Disease → Measles and your Port Health Station to see destinations with measles whose travelers likely arrive at your airport.

2 Check the trend for the origin countries of arriving flights; ▲ Increasing flags where exposure risk is growing.

3 Brief the team with Add to PDF → Print PDF, and follow CDC guidance for travelers with suspected measles.

The Measles tab: map, trends, search and sort in one place

Open  **Measles** next to Public Health Profiles and Map. Everything on the tab — numbers, map, epi-curve, regions and table — follows the same search and filters.

Measles cases reported to WHO

→ About the same 2025: 17,995 cases, down 3% from 2024 (18,530).

▲ 2026: Increasing 2026 so far (Jan-Aug, provisional): 26,205 cases, up 135% from Jan-Aug 2025 (11,129).

Monthly cases, Jan 2023 – latest month (2026 in amber). Recent months may be incomplete.

2021	5,700
2022	40,967
2023	65,150
2024	18,530
2025	17,995
2026*	26,205

*2026: provisional data based on monthly data reported to WHO (Geneva) as of September 2026 (Jan-Aug). — = not reported. [WHO data](#)

In every profile, the measles row shows the 2025 and 2026 trends, a monthly epi-curve (2026 in amber) and yearly totals. Example: India.

QUICK ANSWERS

- Where is measles rising in Africa? Region = Africa, Trend = ▲ Increasing (17 countries in the example above).
- Which countries have the most cases? Sort by 2026 so far (default).
- Large outbreaks among CDC destinations? Minimum 1,000 cases + CDC travel destinations only.
- Before a flight lands: type the origin country, check its trend, open its profile.

Sources. WHO Global Health Observatory (2021–2025); 2026: provisional data based on monthly data reported to WHO (Geneva) as of September 2026. Recent months may be incomplete because of reporting delays. Map colors show reported cases, not incidence rates.
